PHOENIX
ENGINEERING & MANUFACTURING SOLUTIONS

PHOENIX LIGHTING
Industrial/Mining/Hazardous Area Lighting Solutions

CLASS LEADING LIGHTING

Phoenix EMS is a leader in the design and manufacture of Industrial/Mining LED Lighting & Value-Add Solutions.

Our manufacturing capability is enhanced by fully resourced engineering, planning, scheduling and purchasing. This allows Phoenix EMS to handle product variations as well as engineer bespoke designs.

Phoenix EMS are the preferred choice of LED Lighting & Light Pole solutions. Our packaged solutions provide our customers with a commercial and technical advantage.

We also engineer, manufacture and design a complete range of Ultraswing Plant, Fixed, Mid-Hinged and Instrument Poles for our projects.

Phoenix EMS utilises the latest Lighting Design software to assist clients with Lighting Design to meet Australian Standards, Energy Saving Proposals and Audits, 3D Modelling and Intelligent Lighting Solutions.

Phoenix EMS operates Australia wide and has an extensive distribution network.

WITH DEPENDABLE QUALITY

Phoenix EMS luminaires are manufactured in accordance with ISO9000 in accredited facilities and comply with all relevant mandatory Australian Safety and EMC Standards. The products utilise the latest LED technology and are designed to handle tough environments where environmental degradation can cause premature failure of standard lighting products. Some of these factors include, high ambient temperatures, dust, water and chemical corrosion.

ILLUMINATOR

CONVEYOR & BULKHEAD LIGHTS

ILLUMINATOR

The Illuminator is the newest addition to the Phoenix EMS industrial lighting family and is designed to push the light further than ever before with 15 Meter spacing across Conveyor, Walkway and Platform Lighting.

The Illuminator reduces the number of light fittings through the use of superior optics and technology to reduce capital costs and provides a fitting that operates reliably in dusty, dry & hot Australian mining conditions.

TYPICAL APPLICATIONS

Coal & Metalliferous Mine Process Plants, Quarries, Campsite Area Lighting, General Area Lighting Car Parks, Conveyors, Pedestrian Access Road Ways, Stacker/Reclaimers, Stairwells, Tunnels, Walkways Bulkheads.

CYCLOPS

CONVEYOR & BULKHEAD LIGHTS

CYCLOPS

The Cyclops is a high powered LED Conveyor Light fitted with a high transmittance optical lens providing maximum luminous efficiency up to 130Lm/W. It also features a super slim and elegant design structure to meet the IP66 and IK08 requirements, along with a die-cast body to control and regulate temperature rise and heat dissipation performance.
TYPICAL APPLICATIONS

Collector Road, Local Road, Residential Road, Country Road

PHOENIX MASTER

TUNNEL/CONVEYOR/PLANT LIGHTS

PHOENIX MASTER

The Phoenix Master is a brand-new state of the art competitive universal solution for Tunnels, Conveyor & Plant lighting applications. The patented design appearance enables the lamp to have a self-cleaning function to avoid dust collection and its double anti-thunder technology allows the fixture to operate smoothly in extreme conditions. The Phoenix Master also features a built-in 3CCT colour temperature adjustment or the choice of 2200K Amber Turtle Friendly and Green Eyewash.

RAIDER SERIES

HIGH-POWER FLOODLIGHTS

RAIDER SERIES

The Raider Series LED floodlight is designed specifically for use in high mounting applications where large volumes of light are required. Featuring a modular design ranging from 200W - 1200W, the Raider offers unlimited adjustability for any large scale lighting application.

TYPICAL APPLICATIONS

Mining, MIA (Mining Infrastructure Area), Coal, Open Cuts, Metalliferous, Iron Ore, Industrial, Processing Plants, Materials Handling, Lithium Processing, Power Generation, Energy & Utilities, Water & Waste Water, Ports, Wharfs & Waterways, Chemical & Processing, Ports & Wharves, Airports, Car Parks, General Area Lighting, Container Terminals

PHOENIX
CHALLENGER

HIGH-POWER FLOODLIGHTS

PHOENIX CHALLENGER

The Phoenix Challenger is a stainless-steel Floodlight/Bulkhead suitable for a wide range of applications. It features a die-cast stainless steel body that can withstand temperatures from -40°C to 50°C standard and 0°C to 50°C in emergency mode. It is designed with 3CCT (5000K/4000K/3000K) and 3 modes of mounting (Spigot, Stirrup & U Bracket). The Phoenix Challenger is a superior fitting that is designed for dusty, hot and dry Australian mining conditions.

TYPICAL APPLICATIONS

Coal & Metalliferous Mine Process Plants, Quarries, Campsite Area Lighting, General Area Lighting Car Parks, Conveyors, Pedestrian Access Road Ways, Stacker/Reclaimers, Stairwells, Tunnels, Walkways, Bulkheads.

FLIGHT SERIES

FLIGHT SERIES

The Flight Series is a LED Area Light designed for a range of different applications. It features an anti corrosion coating and a housing made of die casted aluminium alloy to ensure greater heat dissipation and also utilises external fins. Along with these features, it is designed to provide a wider, smoother and more uniform light output.

TYPICAL APPLICATIONS

Mining, MIA (Mining Infrastructure Area), Coal, Open Cuts, Metalliferous, Iron Ore, Industrial, Processing Plants, Materials Handling, Lithium Processing, Power Generation, Energy & Utilities, Water & Waste Water, Ports, Wharfs & Waterways, Chemical & Processing, Ports & Wharves, Airports, Car Parks, General Area Lighting, Container Terminals, Airports

EAGLE

LED BATTENS WEATHERPROOF

EAGLE

The polyester powder-coated aluminium enclosure combined with a high-impact polycarbonate diffuser makes the Eagle a good fit for corrosive atmospheres or where the risk of mechanical damage is possible. The IP66 rating of the Eagle allows it to be used in areas where cleanliness is of importance as it can withstand high-pressure cleaning and resistance from chemical cleaning agents. The diffuser is secured with stainless steel cap head screws making it suitable for areas where vandal resistance is required.

TYPICAL APPLICATIONS

Mining, MIA (Mining Infrastructure Area), Coal, Open Cuts, Metalliferous, Iron Ore, Industrial, Processing Plants, Materials Handling, Lithium Processing, Power Generation, Energy & Utilities, Water & Waste Water, Ports, Wharfs & Waterways, Chemical & Processing

INHIBITOR

LED BATTENS WEATHERPROOF

INHIBITOR

The Inhibitor is an IP65 stainless steel waterproof luminaire suitable for high humidity outdoor environments and is designed to withstand extreme temperatures. It is resistant to impact, provides a 50,000 hour lifetime, and has over 70% energy savings compared to lighting with similar lumen output. The Inhibitor features high luminous efficacy, low power consumption, and is pollution-free making it the perfect solution for a wide range of applications.
TYPICAL APPLICATIONS

THUNDERBIRD

STRIP LIGHTING

THUNDERBIRD

The Thunderbird is a high visibility tube light and a high powered LED array (Light Emitting Diode) in a 20mm acrylic enclosed tube with an IP20 rating. This light is suited to Industrial Applications, Visible Break Isolation Panel Lighting, Emergency Lighting, Switch Board Panels and General Electrical Enclosure Lighting. The Thunderbird is a LED array suitable for harsh conditions and sustains a long life. It has been designed to reject electrical interference that normally abounds in industrial environments and includes screw connection for electrical termination.

TYPICAL APPLICATIONS

Cabinet Lighting, Electrical Enclosures, Visible Break Isolators, Strip Lighting

HARRIER PLUS

LED HIGH & LOW BAYS

HARRIER PLUS

The Harrier Plus is a robust LED High Bay Floodlight designed for industrial environments. It features marine grade aluminum housing and a polyester powder-coat finish which provides chemical resistance in corrosive environments. It features over-current, over-voltage and temperature protection to protect the driver and LEDs in case the supply voltage fluctuates and where the voltage transients can damage sensitive electronics.

High Voltage Options Available

ROVER

LED HIGH & LOW BAYS

ROVER

The Rover is a low-profile and durable state of the art fixture. It is designed to quickly and easily upgrade existing H.I.D and fluorescent fixtures. The LED high bay combines high light output LED technology with remarkable energy savings for a quick return on investment. Offered in narrow and wide beam distributions, the Rover can include a dimming feature and be equipped with a motion sensor. The Dali control provides you with the convenience of smart lighting and maximizes your energy consumption savings.

RAPTOR

LINEAR LIGHTS

RAPTOR

The Raptor is a linear LED High Bay Floodlight that features a narrow lighting pattern and asymmetric optic lens that can adapt to environments that require high shelving such as Factories, Warehouses and Workshops. The rectangular light pattern can reduce light loss and works perfectly as an aisle lighting solution. Intelligent Lighting add ons are also available such as a PIR sensor, motion sensor and daylight harvesting sensors.

APOLLO

SOLAR LED

APOLLO

The Apollo is an all in one solar luminaire, featuring built in MPPT technology that tracks the maximum sun for a quick charge. The Apollo allows for 8-10 hours of full brightness after a full charge, or 36 hours in dimming mode. It also features a wide range of control system functions: switch on, dimming, colour temperature, timing, light control, motion sensor, working status display, energy saving analysis, fault report, GIS positioning and group function via it's in built iSense Smart Control System.

TYPICAL APPLICATIONS

Urban and Rural Roads, Highways, Water Dikes, Bridges, Parks, Industrial Areas, City Squares, Residential Areas

SMART TECHNOLOGY

Built in MPPT Technology to track maximum sunlight for quick charging and an EMS Management System to monitor, control and carry out optimal energy usage even after 10 days of rainy weather. The Apollo also has multiple built in control system functions via the iSense Smart Control System which is controlled remotely from a mobile device or computer: switch on, dimming, colour temperature, timing, light control, motion sensor, working status display, energy saving analysis, fault report, GIS positioning and group function.

GALACTIC PLUS

SOLAR LED

GALACTIC PLUS

The Galactic Plus is a die-cast aluminum all in one solar light. It features an anti-UV polycarbonate lens with precision individual optics for uniform illumination and is designed for industrial applications that may have limited access to electrical supply. The PIR/microwave motion sensor and smart lighting controller are built in for remote monitoring, fault tracking and precise positioning, and an automatic fault alarm via a smart cloud platform to access on your mobile device or computer.

GALACTIC MAX

SOLAR LED

GALACTIC MAX

The Galactic Max is the sister product to the Galactic Plus and is an impressive high wattage solar light, available for a wide range of applications. It features a low profile and bifacial solar panel design suitable for remote regions or a no-electric supply zone. The bilateral solar panels increase the overall conversion efficiency by 30%.
The Galactic Max comes with a rotatable LED module, worry-free installation, and is virtually maintenance-free. Available with MPPT Intelligent Control, motion sensor, photocell and dimming options.

TYPICAL APPLICATIONS

Urban and Rural Roads, Highways, Water Dikes, Bridges, Parks, Industrial Areas, City Squares, Residential Areas

SPECIFICATIONS

Model	PLIGALM80	PLIGALM100

SOLARNATOR

SOLAR LED

SOLARNATOR

The Solarnator is the newest solar fitting by Phoenix EMS. It is 360° horizontally adjustable and ±60° elevation angle adjustable. The Solarnator's 12 hour working mode is designed to last for 7 rainy days and an adopted mono-crystalline solar panel with a quick charge LiFePO4 battery. The spigot is fitted with a pluggable waterproof connector in all terminals which makes installation quick and easy.

TYPICAL APPLICATIONS

Urban and Rural Roads, Highways, Water Dikes, Bridges, Parks, Industrial Areas, City Squares, Residential Areas

SOLAR SYSTEMS AND VALUE ADD SOLUTIONS

PHOENIX EMS SOLAR & VALUE-ADD SOLUTIONS

Our impressive range of Solar Lighting has a variety of value-add solutions available to help meet your requirements and create a customised product. Available for both indoor and outdoor applications.

- Patent Double MPPT Controller complete with a super charging function that dims automatically and functions even on rainy days to achieve 'all weather lighting'

- 4G Wifi Network Camera which features 3 mega-pixel lens and night vision distance of 60 meters

- HD 4G Wifi Network Camera which features full night vision and a high quality lens

- 4G Wifi Network mobile app allows you to have full control of camera and adjust according to your preferences
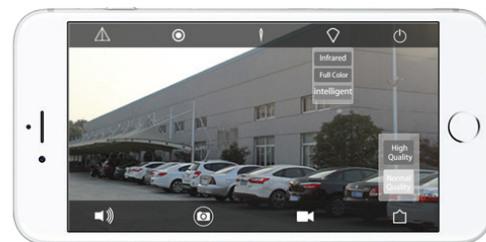

SCOUT

WALL PACK LIGHTS

SCOUT

The Scout is a low profile and light weight LED Wall Pack luminaire which is designed for long life usage with minimal maintenance and great performance. It features a gray cast aluminum coating and has a high lumen output which makes it perfect for Security, Pathway and Perimeter lighting applications by brightening doorways and pedestrian walkways.

TYPICAL APPLICATIONS

Security, Pathway and Perimeter Lighting, Building Facades.

CHIEF

CHIEF

The Chief is an excellent choice for Hazardous Area Lighting and is suitable for a wide range of applications. It features a low-profile, lightweight design and has an impact resistant polycarbonate clear or diffused lens. The Chief's light distribution will project uniform illumination throughout the entire space and it's low maintenance costs reduce power consumption by over 50%.

- Environmentally Friendly 50,000 Hours Lifetime
- Superior colour rendering index compared to HPS, LPS or MV
- Low temperature applications to -40°C and high temperature up to 55°C
- Temperature compensation technology for longer life

TYPICAL APPLICATIONS

Coal & Metalliferous Mine Process Plants, Quarries, Campsite Area Lighting, General Area Lighting Car Parks, Conveyors, Pedestrian Access Road Ways, Stacker/Reclaimers, Stairwells, Tunnels, Walkways, Bulkheads.

DEFENDER

DEFENDER

The Defender is a LED luminaire designed for installation where moisture, dirt, dust, corrosion and vibration may be present, or NEMA 3 and 4X areas where wind, water, snow or high ambient temperatures can be expected. The Defender can be used in locations made hazardous by the presence of flammable vapors, gases or combustible dusts as defined by the NEC and IEC.
The Defender is ideal for retrofit of existing HPS/MH and offers higher efficacy for increased energy savings, lower maintenance costs and shorter paybacks.

TYPICAL APPLICATIONS

Coal & Metalliferous Mine Process Plants, Quarries, Campsite Area Lighting, General Area Lighting Car Parks, Conveyors, Pedestrian Access Road Ways, Stacker/Reclaimers, Stairwells, Tunnels, Walkways, Bulkheads.

HAZARDOUS AREA

WARRIOR

WARRIOR

The Warrior is a new generation LED linear floodlight designed for Zone 1 & 21 hazardous areas. It features a low profile design allowing installation in work areas with low ceiling height. The Warrior has a UV stable and impact resistant clear or diffused PC lens (Standard) to minimise glare and a wiring access cover with captive screws for end to end feed through wiring.

TYPICAL APPLICATIONS

Coal & Metalliferous Mine Process Plants, Quarries, Campsite Area Lighting, General Area Lighting Car Parks, Conveyors, Pedestrian Access Road Ways, Stacker/Reclaimers, Stairwells, Tunnels, Walkways Bulkheads.

SPHINX SERIES

MOBILE MACHINERY

SPHINX 27 - 120

The Sphinx is an IP69 waterproof mobile machinery floodlight and is designed for heavy duty machinery in industrial environments. It features a 9-32 VDC operating voltage range, 30 degree spot beam (60 degree flood beam are available), stainless steel adjustable mounting brackets and is rubber gasket vibration resistant.

TYPICAL APPLICATIONS

Draglines, Shovels, Dozers, Trucks, Forklifts, Water Carts, Wheel Loaders, Light Vehicle Fleet, Mobile Machinery, Front End Loaders, Drill Rigs, Lighting Towers

Lighting to Australian Requirements

In order to provide the right light, we conduct lighting studies by our qualified in house lighting designers and engineers. This also ensures that the lighting in your project meets Australian Lighting Standards. Based on our lighting studies, we provide you with the most suitable LED lighting solutions for your project. Our lighting designers and engineers base their designs solely on the customers needs to develop and create a state of the art lighting solution.

GLOSSARY

Please note that the following information is only a guide.

CCT CHART

What is Colour Temperature?

Correlated Colour Temperature (CCT) is effectively a measure of how yellow or blue the colour of light discharged from a light bulb appears. It is measured in Kelvin and is most frequently found between 2200 Kelvin degrees and 6500 Kelvin degrees.

Warm light sources, such as incandescent bulbs, have a low colour temperature (2200-3000K) and include more light in the red, orange, and yellow range. When you picture a warm colour temperature, think of a fireplace or a room that's lights have been dimmed.

Cool light sources, such as some HID or fluorescent lamps, have a high colour temperature (>4000K) and distribute more light in the blue range. When you picture a warm colour temperature, think of a fireplace or a room that have had their lights dimmed.

LIGHT TEMPERATURE (K)

WARM LIGHT			DAYLIGHT		COLD LIGHT	
2500	3500	4000	4500	5000	5500	6500

CANDLE	INCANDESCENT LAMP	SUNSET	DAWN	DAYLIGHT LAMP	NOON	CLOUDY WEATHER	CLOUDY	CLOUDLESS SKY
1000	3000 3200	3000 3200	3500	3800 4500	5500	6000	7000	10000 15000

Phoenix Engineering & Manufacturing Solutions - Industrial Lighting Catalogue **1300 074 636** | **www.phoenixems.com.au**

171

COLOUR RENDERING INDEX (CRI)

WHAT IS CRI?

CRI indicates how precisely artificial light renders the colour of object. On a spectrum of 1 to 100, CRI estimates the colour rendering and colour precision of objects beneath different lighting compared to how those objects would appear below incandescent lights or natural sunlight. The greater the numerical value of CRI, the better the luminaire or bulbs colour rendering. Normally, a CRI of 80 or above is deemed good, while a CRI of 90 or higher is excellent. Color rendering index should not be confused with color temperature. Color temperature, measured in Kelvin, determines how warm or cool lighting is.

WHY IS CRI IMPORTANT?

It is a critical aspect in any industrial or commercial environment. A LED lamp with a low CRI will divulge a flat, pale hue to anything it illuminates. This can cause plain, monotonous colours. LED lighting with a high CRI can infuse luminosity into your environment. A high CRI will make the colours of anything and everything in its path vibrant. A high CRI is particularly important for colour-critical applications where visual appeal and colour accuracy is fundamental to its environment.

2700K   2700K   2700K   2700K
CRI 100   CRI 90   CRI 80   CRI 70
LED LIGHTING

Industrial LED Lighting can provide better CRI than fluorescents as their CRI value is much higher which leads to better vibrance and accurate colour representation of an object or person.

Different types of lamps have different colour rendering capabilities. At the bottom of the spectrum are high-pressure sodium and mercury-vapor lights, with CRIs of about 24 and 49. Fluorescent bulbs can produce moderate CRI, although you have to pick and choose. Dependent on the material, fluorescents have a CRI range of 50 to 85. When you choose a great fluorescent, you can get good but not an excellent colour rendition.

Modern LED technology can produce a CRI of 90+. This means you can get virtually flawless natural colour if you select a LED with a high CRI. This can be vital in environments where you need natural colouring.

ZONE 0/ZONE 20 - Zone 0 hazardous area is an area where a flammable atmosphere is present continuously or for long periods or frequently. Continuous release inside a dust containment enclosure gives rise to Zone 20 - a place in which an explosive atmosphere, in the form of a cloud of combustible dust in air, is present continuously, or for long periods or frequently for short periods. For example, a mill or pneumatic conveying system.

ZONE 1/ZONE 21 - Zone 1 hazardous area is an area where a flammable atmosphere is likely to occur in normal operation occasionally. A Zone 21 area is categorised as a place in which an explosive atmosphere involving a combination of air or flammable substances in the form of powder or dust is likely to occur in normal operation occasionally. These are normally process areas where dusts and powders are more likely to be present.

ZONE 2/ZONE 22 - Zone 2 hazardous area is an area where a flammable atmosphere is not likely to occur in normal operation but, if it does occur, it will exist for a short period only. A Zone 22 area is categorised as an atmosphere where a mixture of air and flammable substances in the form of powder or dust is not likely to transpire in normal operation, but if it does occur, will persevere for a short period only. These are normally storage areas but can also be process areas.

ATEX - ATEX is the European certification given to equipment tested and approved to be intrinsically-safe. If a product / piece of equipment has official ATEX certification, it has been fully tested and approved to be safe to use in hazardous / explosive atmospheres. Remember, if an electrical / electronic device does not have ATEX approval and does not feature the Ex logo, it must not be used or brought onto site in explosive atmosphere areas. This certification **is not** accepted in Australia.

IECEX - IECEX stands for the certification by the International Electrotechnical Commission for Explosive Atmospheres. To be IECEX certified, all products must go through a monitored process by the International Electrotechnical Commission to ensure that they meet the minimum safety requirements. This process will determine if the products can be used in hazardous or potentially explosive locations. Participating countries in the IECEX Scheme include the majority of countries in Australia, Canada, Europe, Russia, China, United States and South Africa.

Classification of Zones and Divisions			
Type of Area	NEC	ATEX and IEC	Definition
Continuous hazard	Division 1	Zone 0 / Zone 20	explosive atmosphere is continually present
Intermittent hazard	Division 1	Zone 1 / Zone 21	explosive atmosphere is likely to occur in normal operation
Hazard under abnormal conditions	Division 2	Zone 2 / Zone 22	explosive atmosphere is unlikely to occur but if it does, will exist only for a short period

Equipment intended for use in Zone 1 areas cannot be used in Division 1 areas as this covers Zone 0 rated areas also.

Phoenix Engineering & Manufacturing Solutions - Industrial Lighting Catalogue **1300 074 636** | **www.phoenixems.com.au**

173

IK RATING CHART

The Impact Protection Rating (IK Rating) comprises of the letters IK, followed by two digits. These two digits help us to classify the level of protection a piece of equipment offers and categorise the degrees of protection proposed by enclosures for electrical equipment against external mechanical impacts.

This standard stipulates how enclosures should be mounted when tests are conducted, the atmospheric conditions that should prevail, the number of impacts and their even distribution, and the size, style, material, and dimensions of the numerous times of hammer intended to generate the energy levels needed.

IK01 — 200g — 7.5cm — 0.15 joule impact	**IK06** — 500g — 20cm — 1 joule impact
IK02 — 200g — 10cm — 0.20 joule impact	**IK07** — 500g — 20cm — 2 joule impact
IK03 — 200g — 17.5cm — 0.35 joule impact	**IK08** — 5kg — 10cm — 5 joule impact
IK04 — 200g — 25cm — 0.50 joule impact	**IK09** — 5kg — 20cm — 10 joule impact
IK05 — 500g — 35cm — 0.70 joule impact	**IK10** — 10kg — 40cm — 20 joule impact

IP RATING CHART

WHAT ARE IP RATINGS?

IP (Ingress Protection) ratings categorise the level of protection that the exterior of a luminaire provides against solids and liquids entering into and damaging the light. They are usually made up of solids and liquids. The solids digit will inform you how efficient the luminaire is at preventing solids getting in. The solids digit is almost always 5 or 6 as it ensures that the casing of the luminaire is dust resistant and dustproof. The second digit determines how well the luminaire is protected from liquid damage. Our LED lights can be anything from weatherproof or splash-proof right up to fully waterproof.

SOLIDS

PROTECTED AGAINST A SOLID OBJECT GREATER THAN 50MM, SUCH AS A HAND	1
PROTECTED AGAINST A SOLID OBJECT GREATER THAN 12.5MM, SUCH AS A FINGER	2
PROTECTED AGAINST A SOLID OBJECT GREATER THAN 2.5MM, SUCH AS A SCREWDRIVER	3
PROTECTED AGAINST A SOLID OBJECT GREATER THAN 1MM, SUCH AS A WIRE	4

3	PROTECTED AGAINST SPRAYS OF WATER UP TO 60° FROM VERTICAL
4	PROTECTED AGAINST WATER SPLASHED FROM ANY DIRECTION
5	PROTECTED AGAINST LOW PRESSURE JETS OF WATER FROM ANY DIRECTION
6	PROTECTED AGAINST STRONG JETS OF WATER FROM ANY DIRECTION
7	PROTECTED AGAINST IMMERSION UP TO 1 METRE FOR 30 MINUTES
8	PROTECTED AGAINST COMPLETE CONTINOUS SUBMERSION IN WATER
9	PROTECTED AGAINST HIGH PRESSURE, HIGH TEMPERATURE JETS OF WATER AND STEAM

L70 - LED must preserve 70% of their original lumens throughout their rated life. For example, an LED with a life of 25,000 hours means that at 25,000 hours of use, the LED bulb will be generating 70% of the light output that it was emitting when it was brand new.

LM80 - A uniform testing method for determining the lumen depreciation of LED modules or chips over a period of time and under certain set conditions. Normally, LED chips are tested for 6,000 hours until they reach L70. LM-80 defines the rated life of the LED module, but not the life of the complete LED product. Other mechanisms, such as drivers, electrical connections, product integrity, etc. may fail before the LEDs.

LM79 - An approved method that measures the electrical and photometric properties of the LED luminaire. This process includes luminous flux, electrical power, efficiency, chromaticity as well as the diffusion of luminous force. Results of metric measurements displayed on a lighting product label derive from test results based on the LM-79 report.

TM21 - Offers advice on the use of data accumulated through LM-80 tests to evaluate the lifespan of a light source outside the number of test hours suggested by LM-80 and permits us to deduce the lifespan up to six times the number of test hours. For example, luminaires tested for 6,000 hours in a laboratory environment should not be sold with a certification specifying a lifespan greater than 36,000 hours based on the L70 lifespan.
As LED technology advanced, the lifespan of luminaires surged and the 70% figure of L70 began exceeding 60,000 hours. This led to the creation of additional ratings such as L80 (80% of initial lumens) and L90 (90% of initial lumens). Using the table above for an example, a luminaire rated at 50,000 hours L90 would retain 90% of its light output at 50,000 hours, whereas a luminaire rated 50,000 hours L70 would only retain 70% of its output.

LUX LEVELS GUIDELINES

AREA	MINIMUM AVERAGE LUX
General access and movement around work areas	80
General indoor workshop operating areas: Rough work	160
General indoor workshop operating areas: Medium work	240
General indoor workshop operating areas: Fine work	400
Workshop office	320
Control rooms and switchrooms	320
Change rooms	80
Switch room external area (general inspection)	50
Switch room external area (maintenance and repair)	200

Stockpile ring road	30
Stockpile dump areas	50
Stockyard interiors	50
Marshalling yards	20
General roadways	5
Roadway intersections	7.5
Pathways	5
Car park	10

MATERIALS CHART

ALUMINIUM - a light malleable ductile silvery-white metallic element that contests corrosion; the third most rich element in the earth's crust (8.1 per cent), appearing only as a compound, mainly in bauxite.

ALUMINIUM ALLOY - An aluminum alloy is a chemical structure where other elements are added to pure aluminum to increase its properties, primarily to boost its strength. These other elements include iron, silicon, copper, magnesium, manganese and zinc at levels when merged may project as much as 15 percent of the alloy by weight.

ANTI-CORROSION - Anti-corrosion coatings consent for added protection of metal surfaces and act as a barrier to prevent the contact between chemical compounds or corrosive materials. Along with preventing corrosion, they also offer a bonus of abrasion resistance, non-stick performance, and chemical protection.

FROSTED POLYCARBONATE - Frosted polycarbonate is concealed by fine particles. While light transmitting the frosted surface, scattering and diffuse reflection transpires and makes the light soft and uniformly distribute.

GLASS LENS - Its resistance to scratches is incredible. Like most objects, glass is still vulnerable to scratching, but its integral advantages make it hard to scratch and consequently they do not require an added scratch-resistant coating for protection. Glass is thought to be the most optically clear material existing, which is why it's still used in other objects that need precision clarity such as lenses, and microscopes.

MARINE GRADE ALUMINIUM - Marine grade metals are specifically created to endure use in water or wet environments. Generally, this is achieved by adding particular alloys to the metal to make it corrosion-resistant, weigh less, and more economical. Marine grade aluminum alloys usually contain aluminum-magnesium (Al-Mg) alloys and aluminum magnesium-silicon (Al-Mg-Si) alloys.

PMMA - Polymethyl methacrylate (PMMA), also recognised as acrylic or acrylic glass, is a transparent and inflexible thermoplastic material commonly used as an unbreakable replacement for glass. PMMA has numerous technical advantages that include high resistance to UV light and weathering, exceptional light transmission and limitless colouring options.

POLYCARBONATE - A polycarbonate lens is created through a thermoplastic polymer of the carbonate family. It is about 10 times more impact resistant than normal plastic or glass lenses. Polycarbonate lenses are favoured over glass lenses because of its lightweight, ultraviolet (UV) and impact resistance characteristics.
